- **Systems & Infrastructure** File Server Administration & Windows Server Environments & Client-Server Systems & Systems Troubleshooting
- **Tools & Platforms** Visual Studio & Windows 7 & Windows 10 & Microsoft Office Suite
- **Practices** Cross-team Collaboration & Technical Support Operations & Team Coordination & Documentation Maintenance
- **Familiar With** Adobe Photoshop & Adobe Dreamweaver

EXPERIENCE

College of Engineering, University Near You | Technical Assistant | Jul 2016 - Present

Technical Assistant

- Coordinated technical support delivery for large-scale annual events, managing system uptime and troubleshooting requests across multiple concurrent workstreams to ensure reliable service for hundreds of attendees.
- Directed and mentored a rotating team of student workers and volunteers, assigning tasks and reviewing work quality to maintain consistent technical support standards during high-traffic periods.
- Diagnosed and resolved recurring hardware and software issues on **Windows 7** and **Windows 10** systems, reducing repeat support tickets by standardizing common fixes into a reusable troubleshooting checklist.
- Collaborated with the Director's office to prioritize competing administrative and technical requests, balancing short-term event support needs against longer-term departmental system maintenance.

College of Engineering, University Near You | Volunteer Intern, Assistant Systems Administrator | Jan 2016 - Jul 2016

Volunteer Intern, Assistant Systems Administrator

- Maintained and sustained a departmental file server, monitoring storage capacity and access permissions to ensure consistent uptime for faculty and student users.
- Rebuilt and reconfigured decommissioned computers for redistribution, extending hardware lifecycle and reducing replacement costs for the department.
- Updated the College of Engineering IT support website to align with current university standards, improving documentation clarity for incoming support requests.
- Partnered with fellow systems administration team members to divide troubleshooting workload across client machines, applying structured problem-solving to resolve technical issues efficiently.
